Statement from Dr. Lulu Bravo on new data from separate studies in Asia and Africa on the safety, efficacy, and potential lifesaving impact of rotavirus vaccines

“Vaccines protecting children from rotavirus can have an immediate, dramatic, life-saving impact if widely introduced in Asia,” said Dr. Lulu Bravo, chancellor for research and executive director, National Institutes of Health, University of the Philippines. “The higher incidence rate in low-income countries of this region means that the potential number of lives that could be saved here could eclipse the successes we have seen in other parts of the world.”
