Statement from Dr. Dang Duc Anh on new data from separate studies in Asia and Africa on the safety, efficacy, and potential lifesaving impact of rotavirus vaccines

“Despite progress, diarrheal disease remains a threat to Vietnam’s children, causing thousands of illnesses and deaths each year,” said Dr. Dang Duc Anh, Vietnam National Institute of Hygiene and Epidemiology and principal investigator of the Asian study. “The findings from the clinical study in Bangladesh and Vietnam demonstrate that rotavirus vaccines can be a powerful tool to prevent and protect Asia’s children from diarrhea’s most common and deadly form. These vaccines should play a major role in diarrheal disease control in our country and worldwide.”
