

Statement from Megan Wilson, PSI Child Survival Program Manager, on the Release of the Joint UNICEF-WHO Diarrheal Disease Report and Global Handwashing Day

“Diarrheal disease is responsible for the deaths of 1.5 million children under 5 each year around the world. It doesn’t have to be this way. There are inexpensive, proven interventions available now, such as handwashing with soap, which saves children’s lives.” said Megan Wilson, PSI’s Child Survival program manager.
